

Budget Reconciliation: Investments in Clean Electricity Fight Inflation Because Fossil Fuels Are DRIVING Inflation.

Price increases in U.S. from April 2021 to April 2022

Chart: Canary Media • Source: U.S. Bureau of Labor Statistics

The skyrocketing cost of fossil fuels is driving inflation, and renewable electricity is now 4 times cheaper than electricity generated by methane gas. As a result, if Congress passes a budget reconciliation package with climate provisions it would **save Americans \$5 billion annually in reduced energy costs**. That is why voters across the political spectrum want Congress to invest in clean energy.

How important or not important do you think it is that **Congress** takes action to address our energy crisis by investing in clean energy?
